TRANS-LIFT ERGONOMIC ORDER PICKER

TRANS-LIFT ERGONOMIC ORDER PICKER has been developed for easy and quick order picking. The driver stands in the middle of the vehicle and it is easy from the driver's position to pack items into the boxes on the shelves in front of and behind the driver. The platform can be made in various structures, for example with ball rollers to minimize lifting of the boxes during handling.

The surface of the standing platform is covered with a nonskid, shock absorbing rubber mat and has a height above the floor of only 75 mm, which makes it very easy to get on and off the vehicle.

The vehicle is equipped with a 1000watt engine, which via a maintenance-free reduction gearbox and differential drives and brakes on both rear wheels. As a standard the vehicle is built with a special sharp-turning steering system.

This gives a very small turning radius. The driving pace is multi-adjustable transistor-regulated. Speed, acceleration and slowing-down etc. can be adjusted as desired. There is a choice of 3 different reduction gearboxes for maximum speed of either 6 km/h, 12km/h or 18 km/h.

Standard models or "custom made" to suit requirements.

Technical specifications:

Batteries: 24v DC, 160ahp, sealed, maintenance-free truck batteries (gel technology) – if convenient in a box for quick replacement.
Wheels: 400*4 (300 mm diameter) puncture-free wheels. Smudge-free if desired.
Measures: length: 1750 mm
width: 800 mm
Loading capacity: 500 kg

The vehicle is prepared for paperless order picking.
